NO CHANCE FOR CORONA
How Kids can Help Beat the Virus

The disease caused by the coronavirus is called COVID-19.

Cities are more affected because they are crowded. Prevention is the key! Corona enters the body through mouth, eyes or nose.

Older people and those with existing health conditions can get seriously ill. Sometimes they need to be hospitalised.

We must all practice social distancing. It's a very effective way to avoid spreading the virus.

No hand shakes. No hugs. Just smile or say hi.

Keep a distance of 1.5 meters to other people.

Sneeze and cough into your elbow.

Wash your hands with soap when you come back home from outside.

Wash your hands if you come in contact with other people.

Remember to protect yourself and everyone around you!

Guys, together we can slow down the spread of the virus!

The coronavirus doesn't respect borders!

But a person can have COVID-19 without showing any symptoms.

This is why Corona spreads easier than the flu.

When corona enters your body it multiplies, and can cause high temperature and cough.

No team sports. No movies. No eating at a restaurant...

Africa, Asia, America, Europe, big cities, small cities, villages, anywhere!

The poster is based on a comic and a video called “No chance for Corona” jointly created by Welthungerhilfe and WASH United. Both can be downloaded at https://www.welthungerhilfe.org/coronavirus-comic/
